

## **C-20 Recurarization in the Postoperative Care Unit**

**Moderator(s)/Facilitator(s):** Dheeraj Nagpal, M.D.

### **Objective**

After completion of this session, the participant will be able to:

- Describe steps to identify and avoid residual neuromuscular block.

### **Case Stem Question**

46 year old female for urgent appendectomy. No past medical history, Underwent uneventful procedure. Had an episode of desaturation and cardiac arrest in the Postoperative care unit, needed reintubation and ACLS

### **Guiding Questions for Discussion**

Can we rely on sugammadex to reliably reverse deep neuro muscular block?  
Should rocuronium be titrated with strict neuromuscular monitoring?
